Art Unit: 2856

DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-21, drawn to a multi-parameter water quality monitoring system with plural multi-parameter monitoring tools with sensor head components, communicating over a network, and a central controller.

Group II, claim(s) 22-29, drawn to a method of measuring oxygen in liquid.

Group III, claim(s) 30-37, drawn to a multi-parameter monitoring system with microprocessor communicating with plural sensors connectable over unactivated circuit, and high impedance buffer device.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group II includes at least measuring oxygen in liquid not required of the other groups. The only feature in common is a sensor between Group II and Group I which is not considered new in the art.

The inventions listed as Groups I and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group III includes at least a microprocessor communicating with plural sensors connectable over unactivated circuit, and high impedance buffer device not required of Group I. The only feature in common between the two groups is a multi-parameter monitoring system which is not considered new in the art.

The inventions listed as Groups II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group III includes at least a microprocessor communicating with plural sensors

connectable over unactivated circuit, and high impedance buffer device not required of Group I. The only feature in common between the two groups is a sensor which is not considered new in the art.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles D. Garber whose telephone number is (571) 272-2194. The examiner can normally be reached on 6:30 a.m. to 3:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hezron Williams can be reached on (571) 272-2208. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
